

Stainless steel integrated wall panel

# Designer Support Program

Dear Designers ,

We are pleased to share with you our specially developed designer support program,Stainless steel integrated wall panel. [It has developed aircraft interior materials into a decorative material suitable for global high-end buildings , so that you can more easily and smoothly complete the design and decoration works, thus helping you to enhance your popularity in the industry. your design expertise together with our new materials makes us a successful combination.

In this support program, you will find the most important products and cost control tools and learn how to benefit from our partnership. the unique selling points we listed help you get more interior decorative project contract.

Selection guide for our stainless steel honeycomb panel will help you and your customers choose patterns and colors and installation way easily.The The design guide provides the best solution of the project, reduces the cost of the product, helps you with detailing of the drawings, vitalize the effect of pre-installation, and helps you greatly shorten the installation time on site.

Furthermore, our website [www.crmmetal.com](http://www.crmmetal.com) allows you to find everything you need for a successful sale and you can download brochures and project stories. we hope you find this guide useful and we wish you all the success in design and business d

*Ricky Wong*

Crazy Metal C E O

# Excellent partners:

we are committed to your success. This is why we have established the following Designer Support Program to support your career development:

Stainless steel integrated wall panel have good fame in the industry for their product quality and fast installation. This helps with your perfect project and build a good fame in your industry.

- Your benefit:
- Use our global patented products to provide better choice of decoration materials for your design
- Use new environmental materials to help you get more project contracts
- Get recommendations from our team for bidding projects
- Get free recommendation from us for supply chain of other materials

## Easy projects

As our partner, we will provide you with a professional product manager (20 years of decorative building materials work experience, 14 countries' project implementation experience, and smooth English communication) to help you successfully complete the design work, tender work and project installation.

- Your benefits:
- We help you reduce product costs, shorten construction time and save project budget
- Achieve Material surface treatment closest to original design
- Most seamless panel joint
  - 100% pre-installation in the factory before shipment to assure accuracy of on-site installation.
  - all production status, delivery times and orders is always trackable via [www.crzmetal.com](http://www.crzmetal.com)

Stainless steel honeycomb panel is aircraft decoration material

Crazy Metal has the patent

## The most attactive product series

As our partner, you always have a wide competitive products and the right tools to do your job easily. We ensure that the products you purchase meet the requirements and standard of the industry.

- Your benefits:
- A wide selections of stainless steel honeycomb panels and one-stop service to reduce the the difficulty of the coordination of different suppliers.
- stock, standard products or 100% customized solution for your choice.
  - Short lead time and your budget satisfactory.

We provide designers with continuous product training and design support, efficient business support, and valuable insights into customer needs.

- Your benefits:
- Get a comprehensive product training on website
- Get all product information, certification and specifications on the website
- According to your needs, we provide online one-to-one professional training on "stainless steel honeycomb panel" products and applications

First class designer support program Dedicated to fast installation.

# High-end architectural decoration, starting from the use of aircraft materials

With more than 20 years of successful development of building materials, we understand your application and provide creative solution for your requirements

Our patents are about aircraft decoration material, and our complete solutions are about shortening the installation period and helping customers with urgent projects;

Our goal is to provide the best products and solutions for your work. That's why our experts are constantly committed to making our products more modular, better surface, easier to install, and always at your service.

All of our solutions can meet today's challenges And tomorrow's demands.

Professional reliability

# Crazy Metal 0100 Series

## Stainless steel Facade System

Project material: stainless steel integrated wall panel water wave pattern

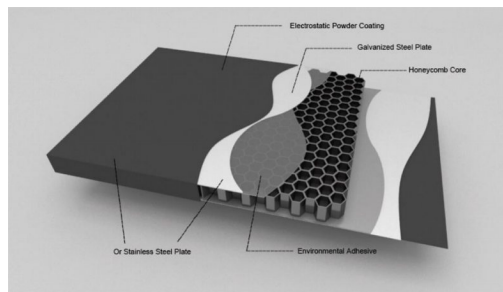

Project area: 3000 square meters

Project effect: water wave feeling, Large area segmentation, full of design sense

Project period: 30 days, saving 30 days

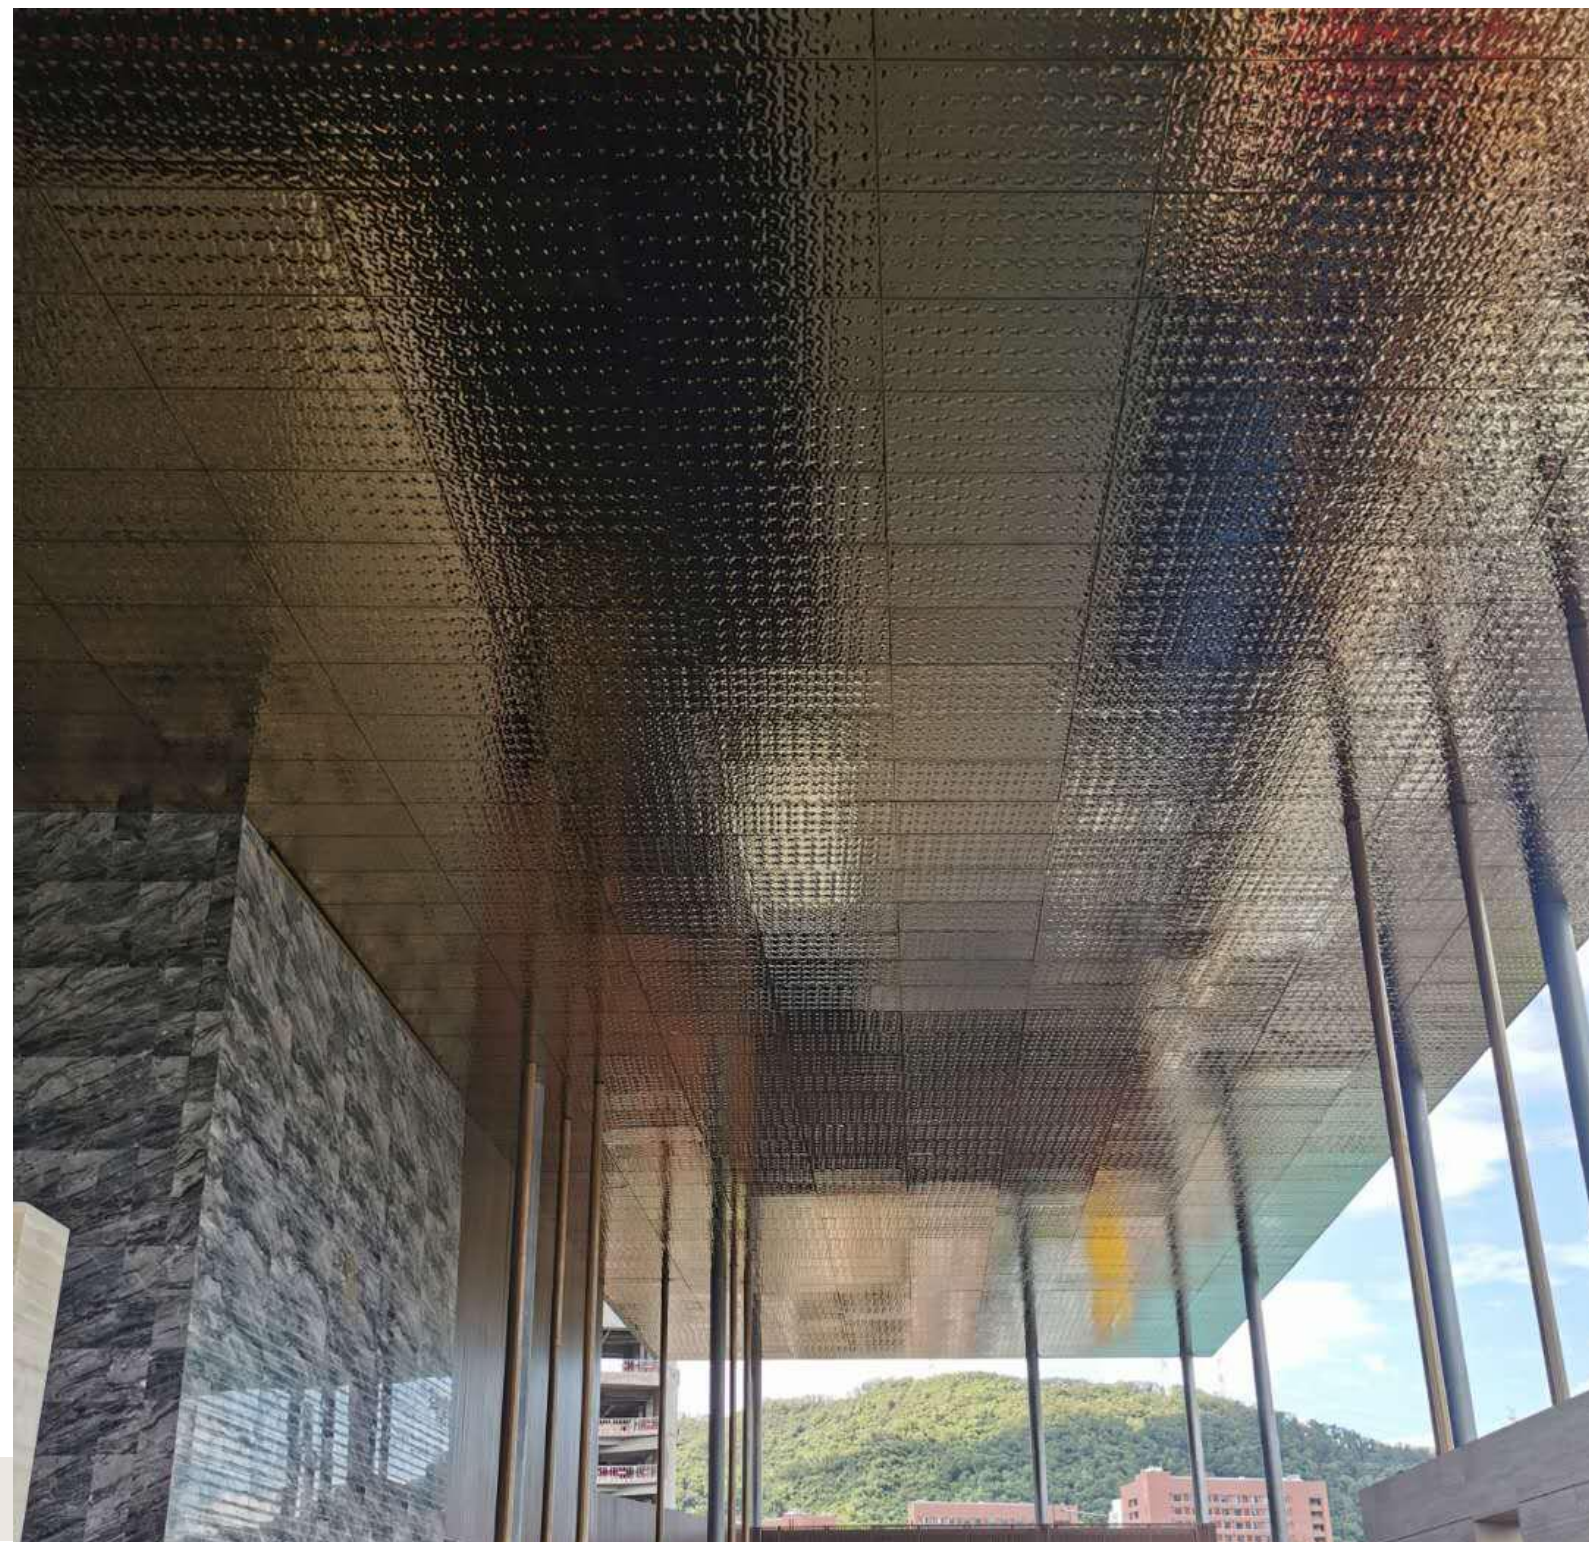

Stainless steel integrated wall panels have proven its ultimate reliability worldwide

Useful, safe and mature technology, carbon consumption greatly reduced

**capable to adapt to unique irregular shape design**

Professional reliability

# Crazy Metal 0200 Series

## Escalator decoration System

Project material: Flat Stainless steel integrated wall panel

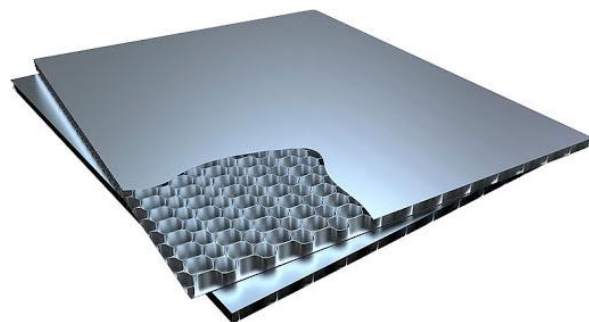

Project area: 2000 square meters

Project effect: mirror flatness neat and clean

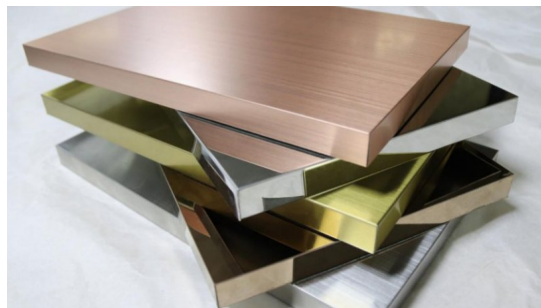

Installation period: 15 days ,saving 15 days

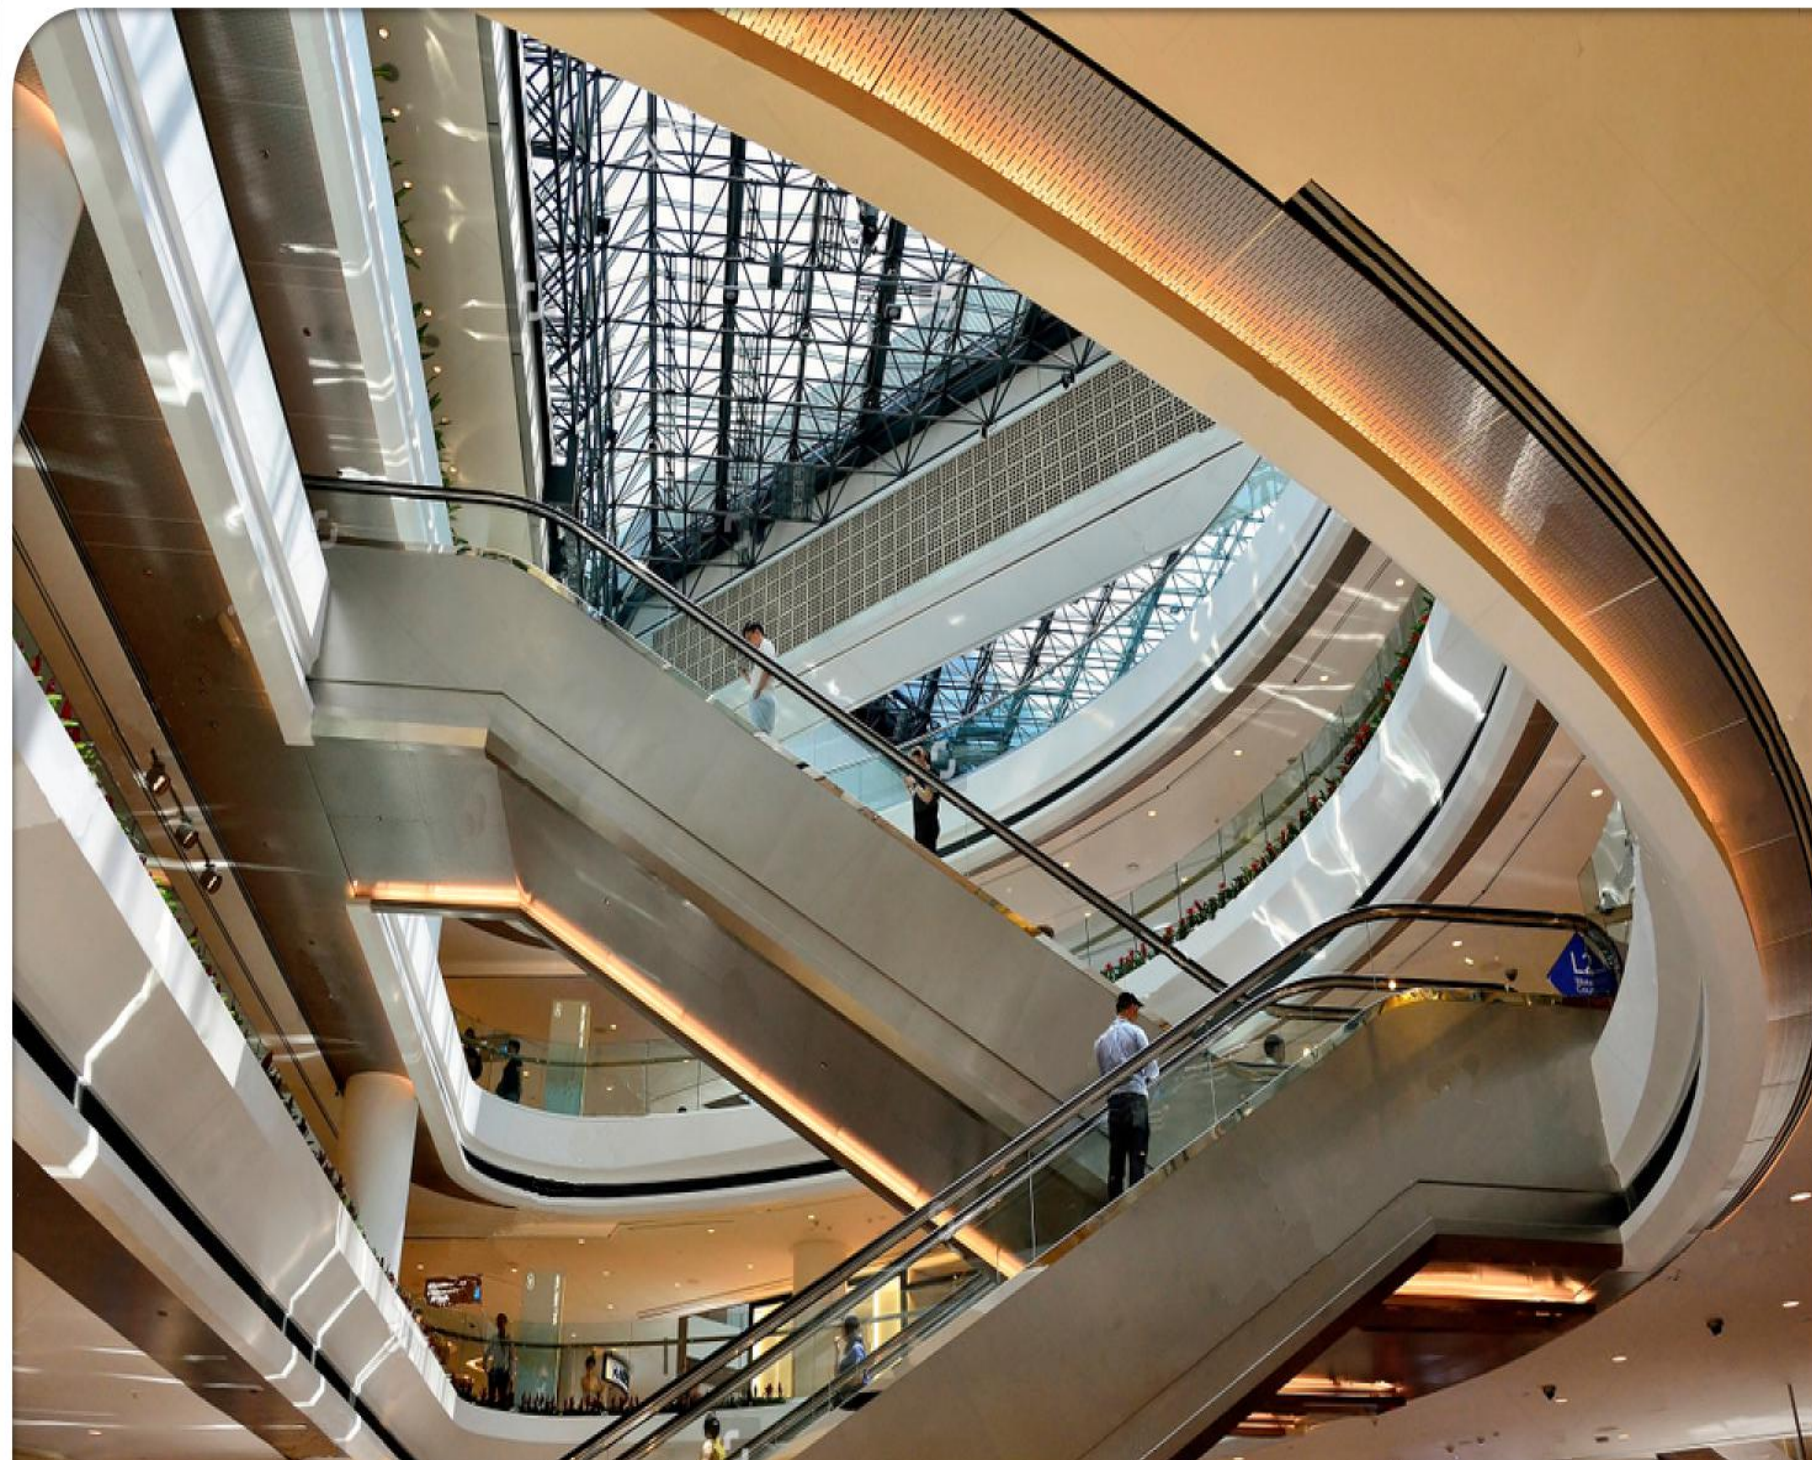

Stainless steel integrated wall panels have proven its ultimate reliability worldwide

Useful, safe and mature technology, carbon consumption greatly reduced

**capable to adapt to unique irregular shape design**

Professional reliability

# Crazy Metal 0300 Series

## Stainless steel water ripple ceiling System

Project material; Stainless steel integrated wall panel with water ripple pattern

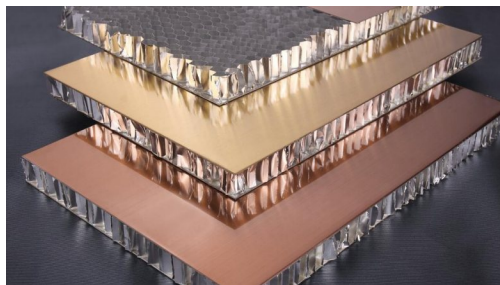

Project area: 2000 square meters

Project effect: water wave effect, cool feeling and highend look

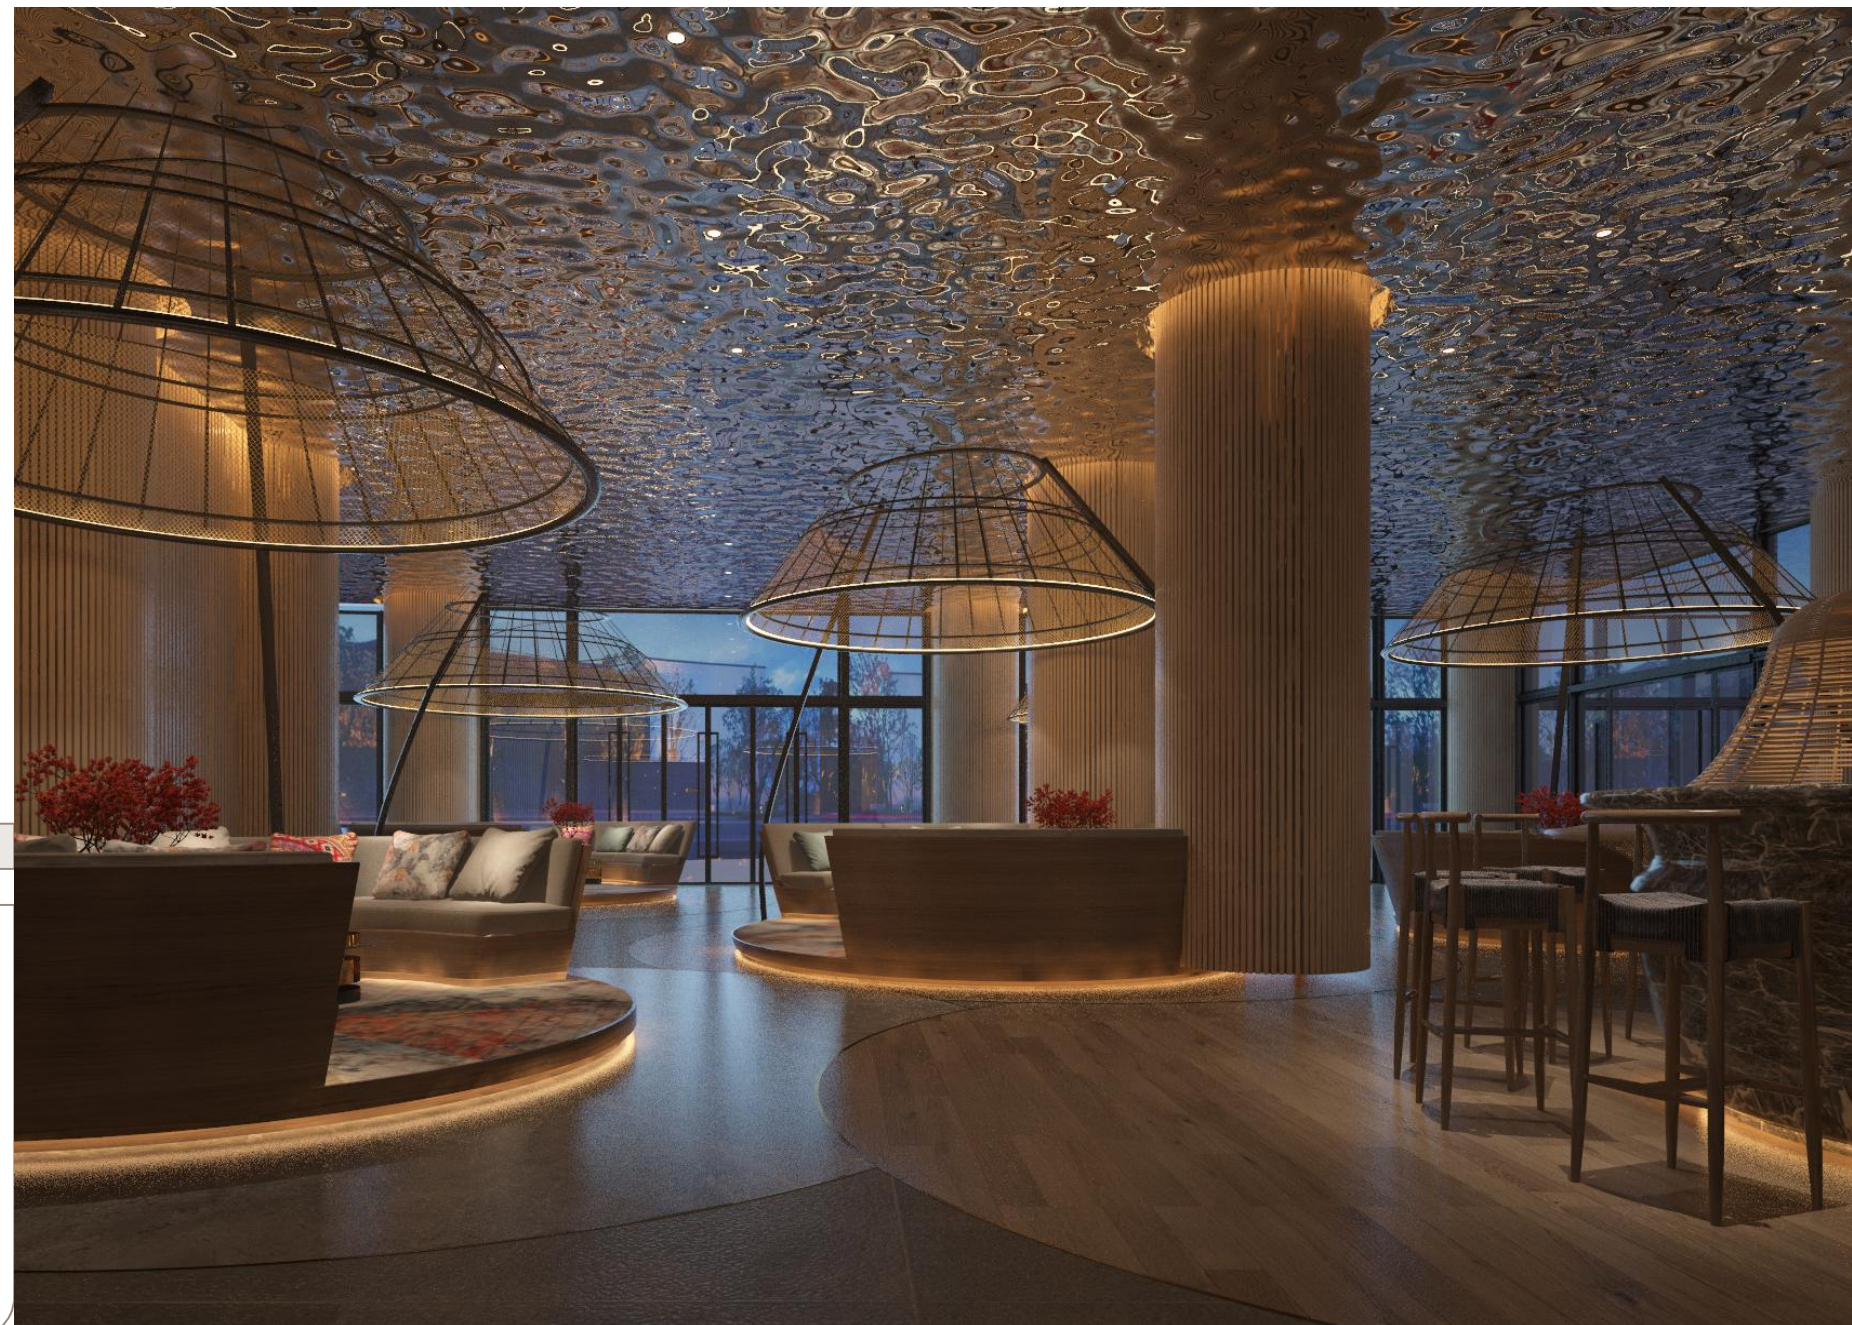

Installation period: 20 days. Saving 20 days

Stainless steel integrated wall panels have proven its ultimate reliability worldwide

Useful, safe and mature technology, carbon consumption greatly reduced

**capable to adapt to unique irregular shape design**

Professional reliability

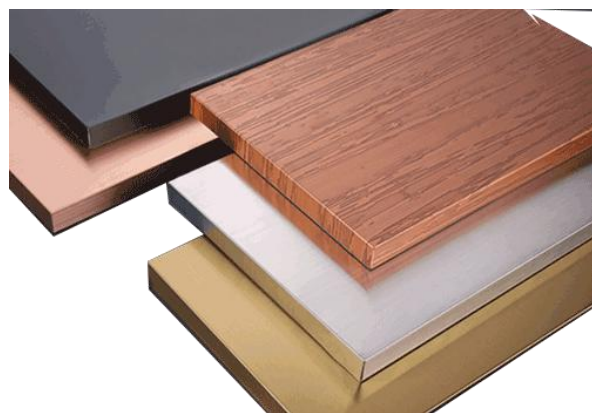

# Crazy Metal 0400 Series

## Stainless steel Toilet Partition System

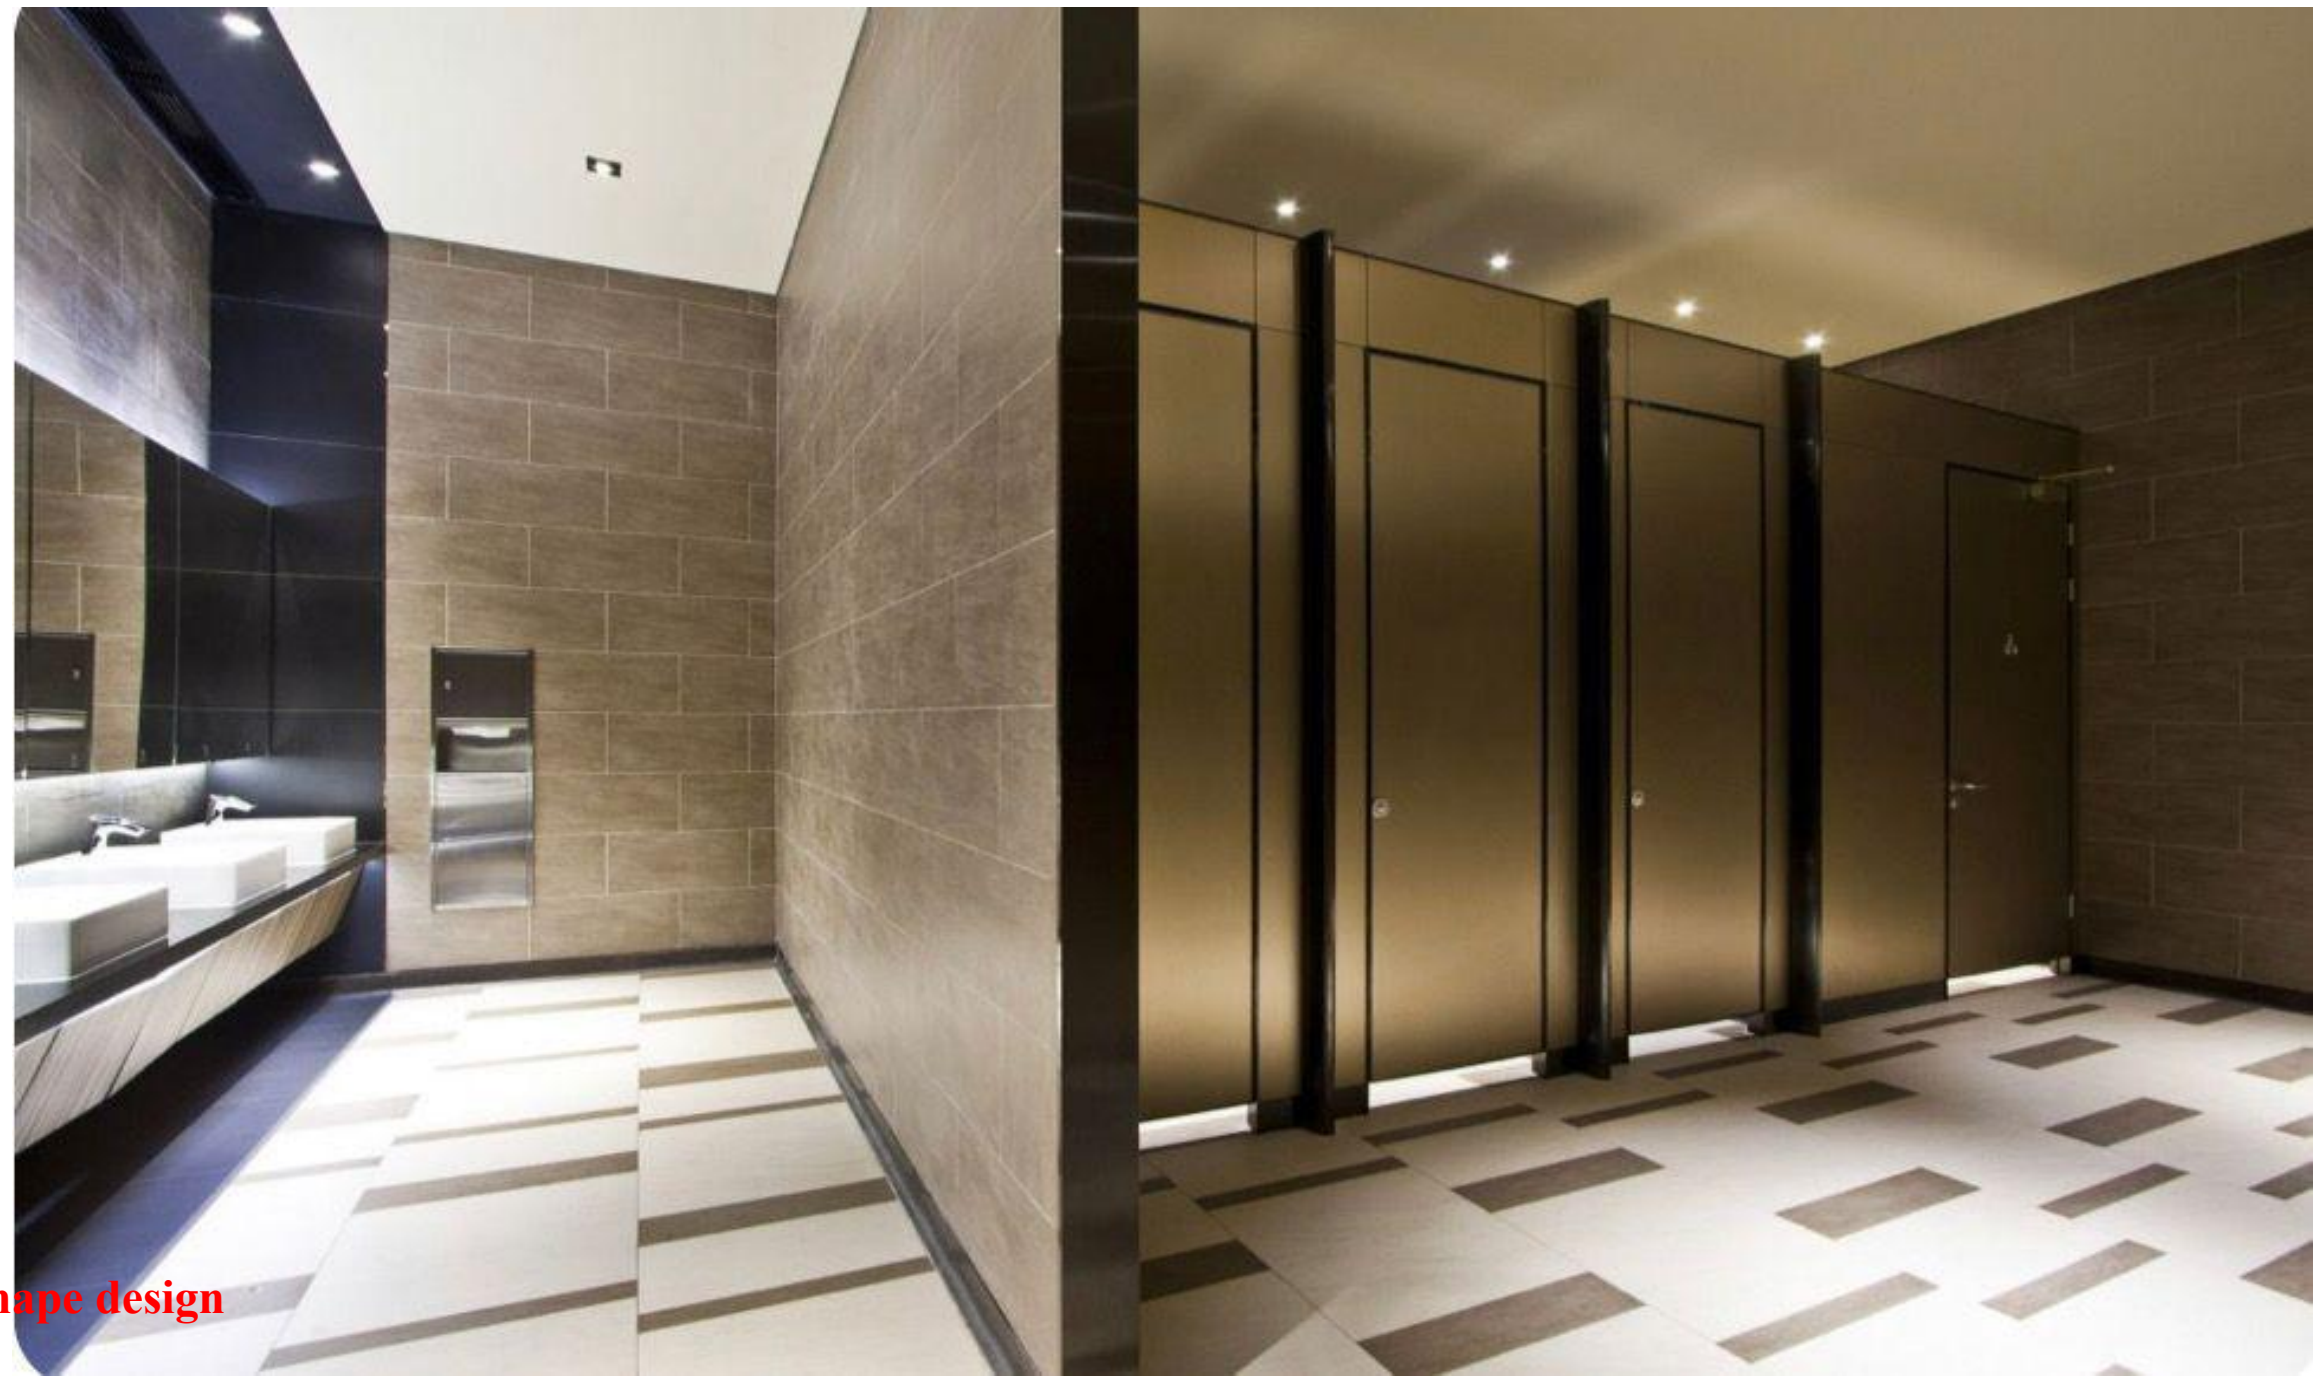

This series adopts suspended installation, all the panels are suspended, and the design without supporting feet makes the same space more spacious to use. Its unique suspended structure demonstrates the simplicity and elegance of the bathroom, and makes the bathroom clean without dead ends and easy to maintain.

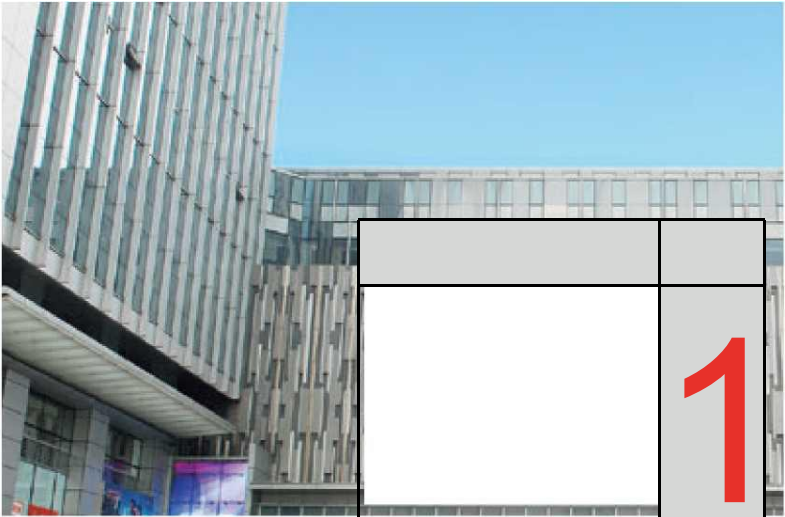

### Application

Airports, star hotels and other places

**capable to adapt to unique irregular shape design**

# Crazy Metal future project

## today's solution can meet your future requirement

Our Stainless steel integrated wall panel solution is designed to meet the needs of today's interior design and decoration and prepare for the future in terms of international environmental protection building material upgrading and the decoration demand of the fourth generation building . These highly standardized panels and pre-assembled accessories are easy to select and deliver quickly. This ensures that you always get the right solution from a single vendor. Detailed drawings and product information in 2D and 3D (AutoCAD) are also available to help simplify installation.

# QUALITY

Excellent products

The Aluminum Honeycomb Core is composed of multilayer aluminum foil. Honeycomb is formed after fully expanded. Our aluminum honeycomb core has sharp and clear hole surface, and it is suitable for adhering to high grade panels as well as other purposes. At present, two types of product we mainly produced are micro aperture aluminum core and normal aluminum core.

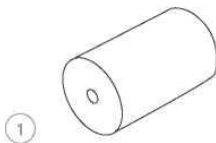

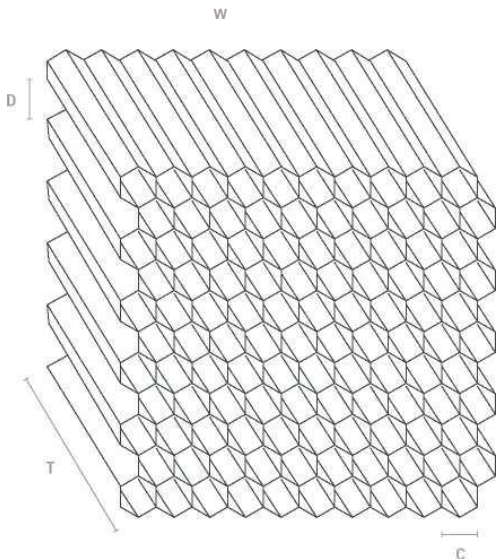

## DESCRIPTION

Material alloy 3003h18 or 5052h18

Aluminum Honeycomb supplied the range is da follows:

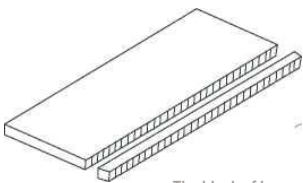

- Expanded or unexpanded.
- Full blocks or cut slices.
- Perforated or unperforated.

W - Width D - Distance Between Cell T - Thickness  
L - Length node C - Cell Size

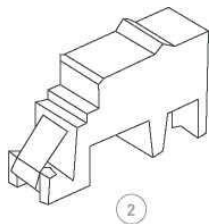

Corex honeycomb begins life as a coil of aluminium foil.

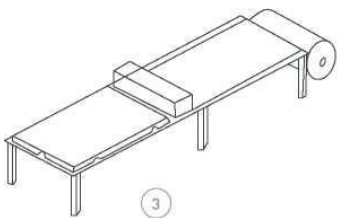

## MANUFACTURING PROCESS

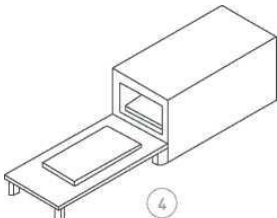

The block of honeycomb can be cut into slices The thickness of the slices will be tailored to each customer's individual requirements.

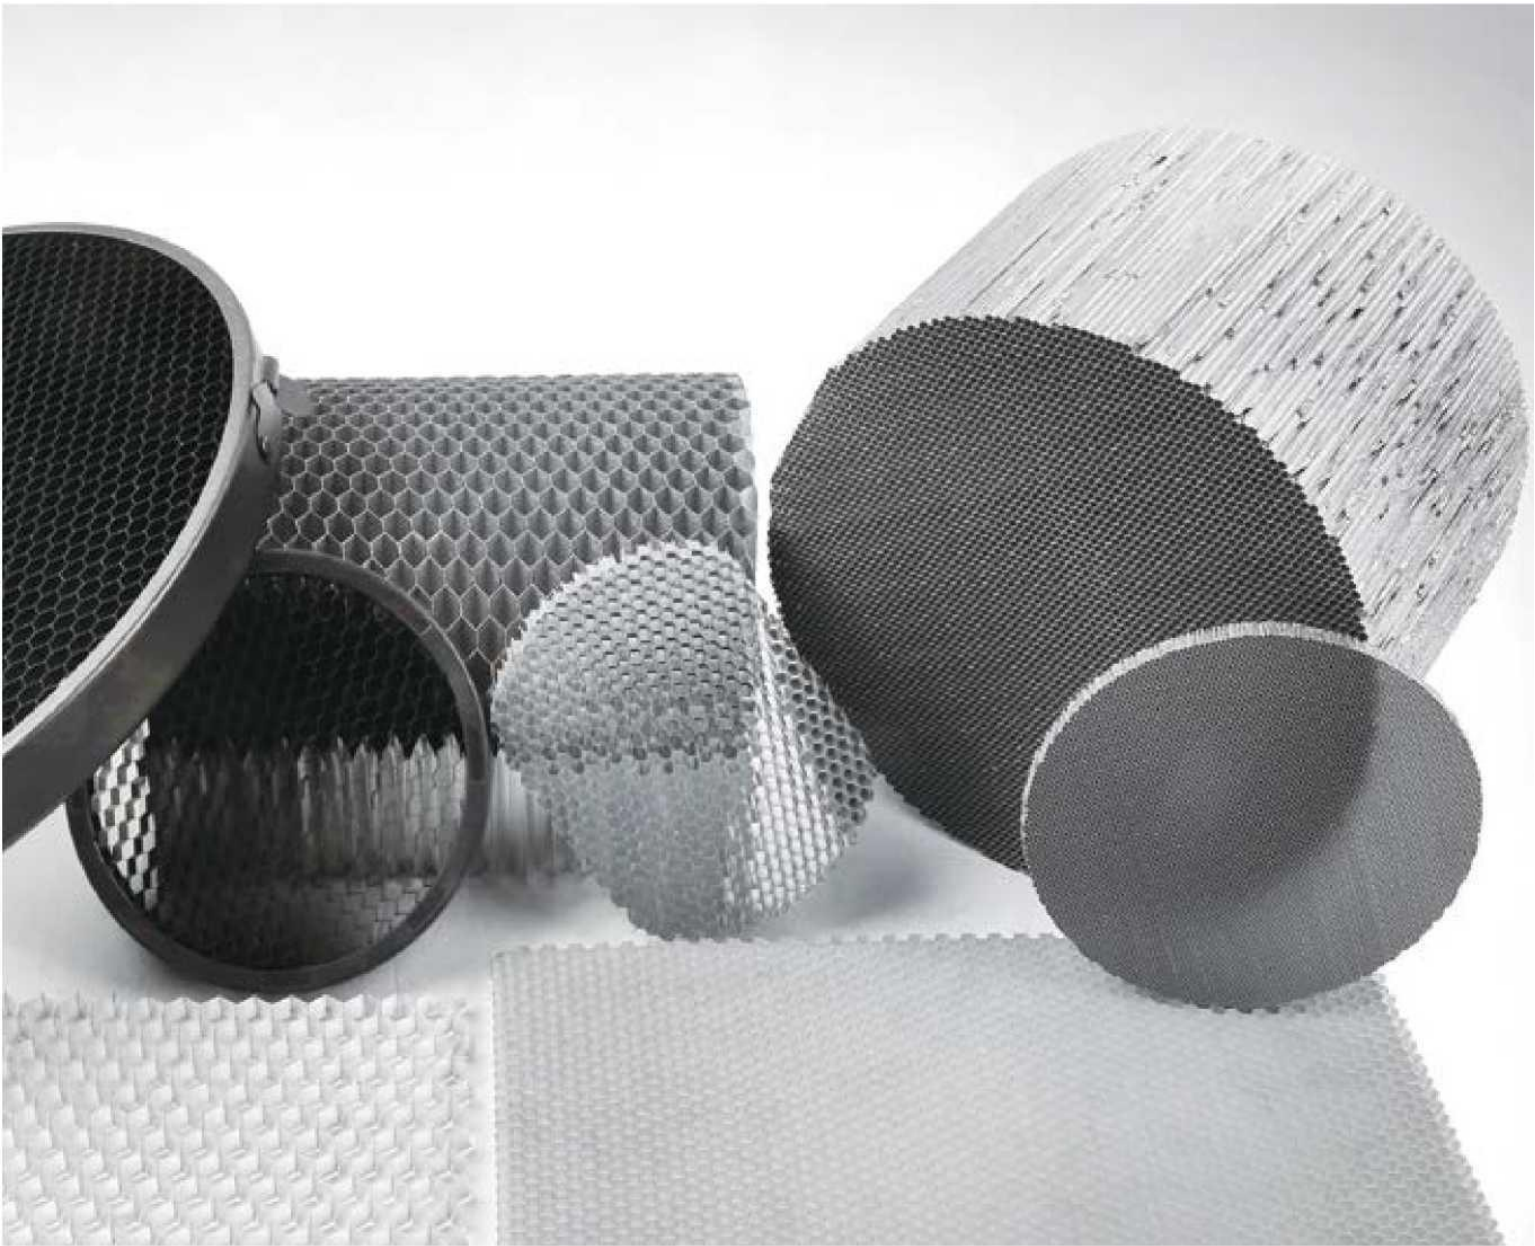

Foil goes through the printer for adhesive lines to be printed.

Once the lines are printed, the foil is cut to size and stacked into piles using the stacking machine.

Following this the stacked sheets of foil are pressed using a heated press to allow the adhesive to cure and bond the sheets of foil together forming a block.

# QUALITY

## DEFINITION

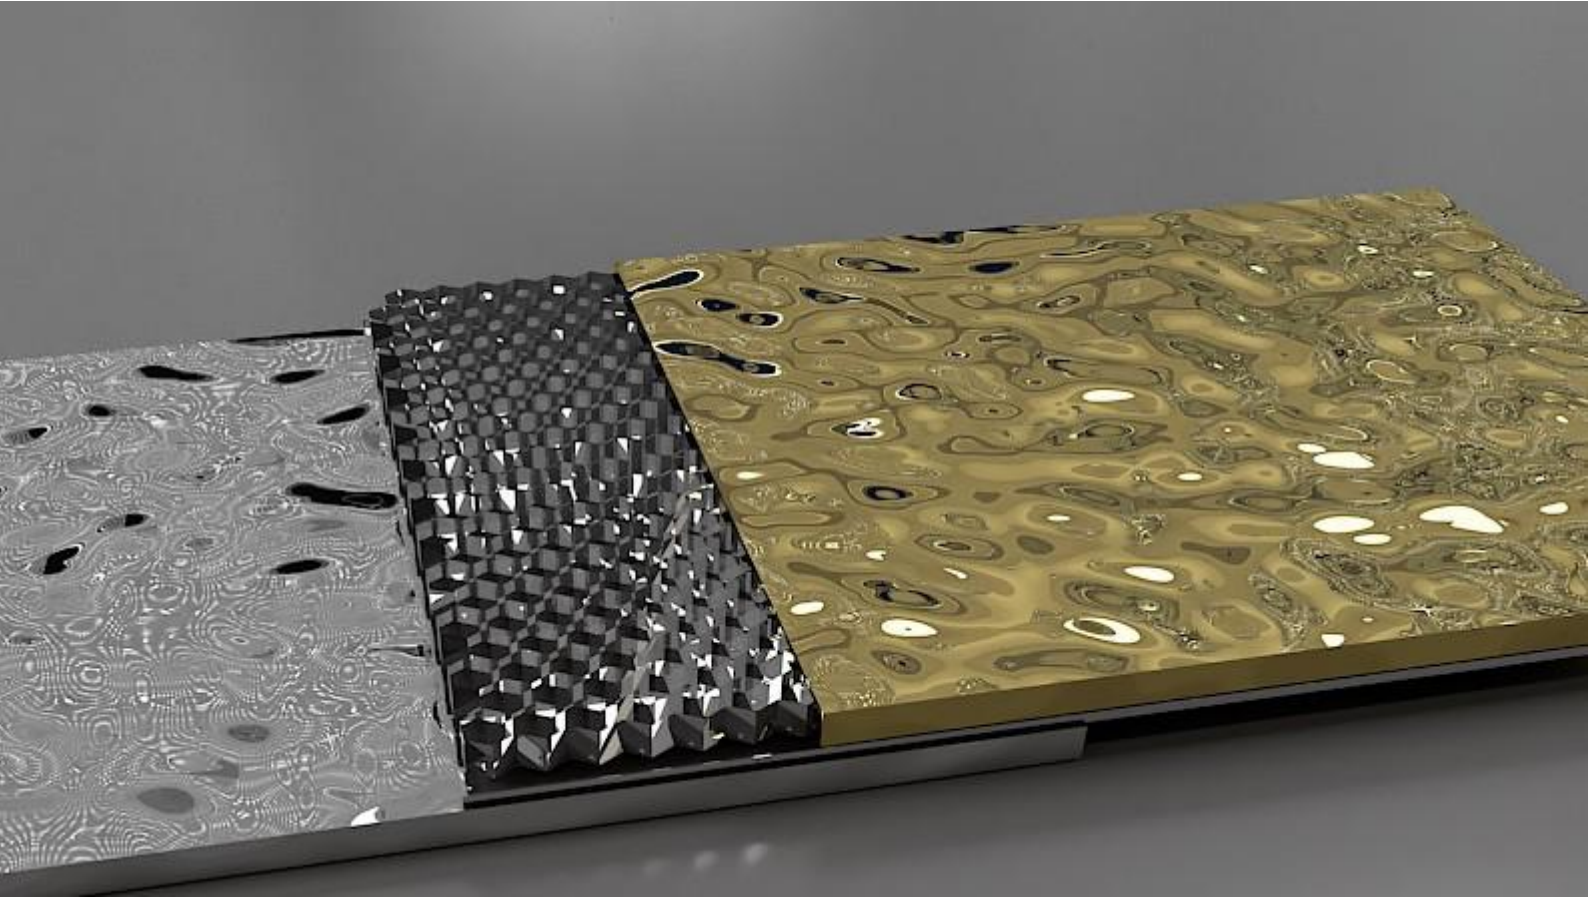

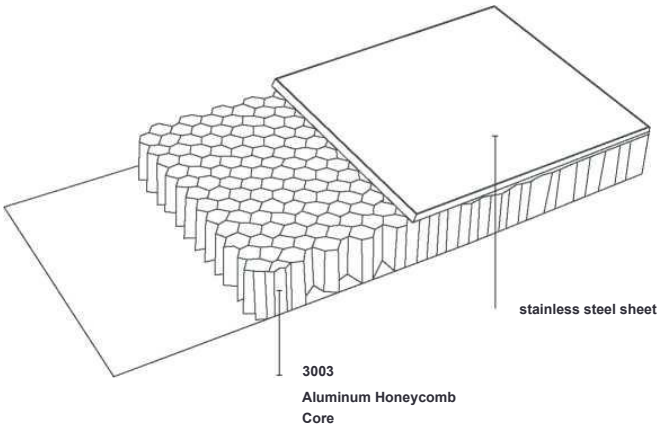

The stainless steel honeycomb composite panel exterior wall is a high-level building decoration material used only in the aerospace industry in the past. The surface of the board is a stainless steel plate, and the middle layer is an aluminum foil honeycomb structure] (stainless steel honeycomb can also be used), which has excellent rigidity, and the metal curtain wall material is the best product. This product is widely used in modern architecture and decoration

train, automobile and shipbuilding and other manufacturing industries. Wherein, PVDF color surface protective layer of stainless steel honeycomb panels against weathering, durability and chemical resistance with excellent color and other aspects of performance, it can be widely used in a variety of climates, from cold and dry to hot and humid Nordic equatorial zone can be used.

## CHARACTERISTICS

- Light
- Good rigidity
- Flat and straight
- Good at wind-proof and pressing-proof
- Fire-proof
- Easy to process and shape
- Good at weather-proof
- Good intensity
- Good at sound and heat insulation
- Good at shock-resistance
- Green building material
- Energy-saving and environmental protection

# Objection handling procedure

**This section provides you with the proof for handling argument, the most common criticism or objection.**

**>Stainless steel integrated wall panel is too expensive**

incorrect. When customers focus on competing products, they only consider the purchase price of the product itself. Stainless steel integrated wall panel provides steel frame and connectors which saves substrate material cost and save installation time and money. Furthermore it saves a lot difficulties to coordinate with substrate providing partners.

By providing the right technical advice, we can demonstrate differences in quality and performance, ease of installation, reduced maintenance requirements and longer service life, all of which make our honeycomb panels cheaper in the long run. Customers also appreciate our support expertise when they need them.

**>by the seashore, the aluminum honeycomb will still get rusted**

We have stainless steel honeycomb choice and they will never rust

**>Stainless steel integrated wall panel can not replace copper panel for decorattion**

Incorrect. Stainless steel honeycomb plate can imitate all copper surface, etching technology and engraving technology are very mature, automatic electroplating process can make all copper material surface. Real copper will rust and have a low service life. We decorated 8000 square copper look walls with Stainless steel integrated wall panel in XXX Hotel in New Zealand.

**>It is difficult to standardize Stainless steel integrated wall panel, which needs to be customized according to the requirements**

Incorrect. Our Stainless steel integrated wall panels product series allow customers to choose from our defined standard series (supported by easy selection Guide) or give customized requirement. We can meet any specific requirements (based on standardization options).

**>Stainless steel integrated wall panel does not have a long application history**

Incorrect. We have more than 20 years of Stainless steel integrated wall panel manufacturing technology and extensive installation and maintenance experience. Today, We have proven reliable solutions and more than 100 high-end building applications in many countries.

**>Our wall has irregular shape and Stainless steel integrated wall panel can not meet the required application.**

Incorrect. The minimum radian of Stainless steel integrated wall panel can reach 10 degrees, which can fit various arc walls; the angle degree is 90 degrees, and there is almost no gap between the two pieces; the maximum height of the panel can be 6meters.

**>We can also use stainless steel plate cladding to meet the requirement.**

Incorrect, the stainless steel cladding plate is installed with wood substrate. The fireproof performance of the wood is not good, it is easy to be corroded with short lifetime.

The flatness of stainless steel cladding plate is poor, so it is difficult to improve the beautiful appearance of the wall.

**> Installation may encounter unknown difficulties**

We will provide steel frame and complete set of accessories. There is only simple work of fastening screws according to the drawing. Very easy under our installation guidance.

Excellent products

# Product application

## Ceiling and wall cladding

10-30mm thick Stainless steel integrated wall panel. Over 200 color and texture selections to meet the requirements of the ceiling and wall decoration.

## Facade decoration

10-30mm thick Stainless steel integrated wall panel. Over 200 color and texture selections to meet the requirements of the facade decoration.

## Elevator outer facade and room door

10-30mm thick Stainless steel integrated wall panel. Over 200 color and texture selections to meet the requirements of the elevator facade decoration.

## Escalator decoration
